## Why is My Car AC Blowing Hot Air? | BlueDevil Products

When you start your car, the AC compressor should be running. If it's not, you may have a problem with the AC system. One common issue is a bad compressor. The compressor is responsible for circulating the refrigerant through the system. If it's not working, the refrigerant won't be able to cool the air. Another possibility is a clogged condenser. The condenser is responsible for releasing the heat from the refrigerant. If it's clogged, the heat won't be able to escape, and the air will be hot. You can check the condenser by looking at it from the front of the car. If it's dirty, you can clean it with a hose. If you're not sure, it's best to have a professional mechanic check the system.
