PLC Program Examples From The Real World. These next PLC programs are examples of real-world PLC applications. All examples of how to use PLC programming and ladder logic to solve real problems. Traffic Light Ladder Logic Diagram. One of the most used applications for a PLC is the traffic lights.

Ladder Logic Examples and PLC Programming Examples

The most commonly used PLC programming language is the Ladder Logic Diagram. The reason for its popularity is that Relay Logic Diagrams were closely resembled by the Ladder Logic Diagrams. When the PLC was invented, designers found a way to use the existing knowledge of the Relay Control System designers for programming the PLC.

Basic PLC Programming - How to Program a PLC using Ladder ...

Most ladder logic programs are managed from a continuous task. A continuous task is one that runs from start to finish over and over again. The tank fill program is an example of a program that runs continuously. Instructions and rungs are placed inside routines.

Ladder logic (also known as ladder diagram or LD) is a programming language used to program a PLC (Programmable Logic Controller). It is a graphical PLC programming language which expresses logic operations with symbolic notation. Ladder logic is made out of rungs of logic, forming what looks like a ladder - hence the name 'Ladder Logic'.

PLC Example 1 : A signal lamp is required to be switched on if a pump is running and the pressure is satisfactory, or if the lamp test switch is closed. For the inputs from the pump and the pressure sensors we have an AND logic situation since both are required if there is to be an output from the lamp. We, however, have an OR logic situation with the test switch in that it is required to give an output of lamp on regardless of whether there is a signal from the AND system.
