transcription, segments of DNA serve as templates to produce complementary RNA molecules. In prokaryotes, RNA synthesis and protein synthesis takes place in the cytoplasm. In eukaryotes, RNA is produced in the cell's nucleus and then moves to the cytoplasm to play a role in the production of protein.

the promoter sequence is the DNA sequence TAC, the RNA polymerase will bind to the promoter, and the strand of DNA will then separate and transcription. Elongation of mRNA DNA polymerase will open the DNA strands, mRNA codon will bind to DNA triplet, after that mRNA will add nucleotides to the growing mRNA strand.
