Once the coiled tubing size, flowrates and N2 volumes have been determined, the following should be conducted: 1. Rig up the coiled tubing and pressure test as per standard procedures. 2. Displace the coiled tubing to N2 and perform gas pressure test if required by client. 3. Open well and commence running in hole at 50 ft/min (15 m/min).

A coiled tubing unit (CTU) is a self-contained multi-use machine that can do almost anything that a conventional service rig does - with the exception of tripping jointed pipe. There are generally two types in shallow service - Arch and Picker. One uses a vertical elevator with a horsehead on top, and an injector hanging by winch line off it.
