Electromagnetic Field Theory and Transmission Lines is an ideal textbook for a single semester, first course on Electromagnetic Field Theory (EMFT) at the undergraduate level.

Electromagnetic Field Theory and Transmission Lines [Book]

The usual electromagnetic wave propagating on transmission lines are TEM waves that can be modeled by solving Maxwell's equations with the proper boundary conditions on the conductors or with a distributed circuit model leading to telegrapher's equations.

Electromagnetic Waves & Transmission Lines

The higher the frequency of electromagnetic waves moving through a given cable or medium, the shorter the wavelength of the waves. Transmission lines become necessary when the transmitted frequency's wavelength is sufficiently short that the length of the cable becomes a significant part of a wavelength.

The image below shows the range of frequencies for different forms of electromagnetic radiation found in the electromagnetic spectrum. The waves from power lines and electrical devices have a much lower frequency than other types of EMR, such as microwaves, radio waves or gamma rays.

Communications, antenna, radar, and microwave engineers must deal with the generation, transmission, and reception of electromagnetic waves. Device engineers working on ever-smaller integrated circuits and at ever higher frequencies must take into account wave propagation effects at

Electromagnetic Waves and Antennas

In most transmission lines, the electric and magnetic fields point purely transverse to the direction of propagation: such waves are called transverse electromagnetic or TEM waves, and such transmission lines are called TEM lines.

Chapter 7: TEM Transmission Lines - MIT OpenCourseWare

The electromagnetic spectrum represents all of the possible frequencies of electromagnetic energy. It ranges from extremely long wavelengths (extremely low frequency exposures such as those from power lines) to extremely short wavelengths (x-rays and gamma rays) and includes both non-ionizing and ionizing radiation.

known as transmission lines, are used for electromagnetic energy flow from power (60 Hz) to microwave frequencies, as delay lines due to the finite speed c of electromagnetic waves, and in pulse forming networks due to reflections at the end of the line. Because of the electrode boundaries, more general
