Protocols Overview - Lightwave Therapy

Red LED light therapy is red light therapy, just using an LED light source instead of incandescent, fluorescent, or laser. But red LED light therapy does have some unique benefits of its own. LEDs were NASA's choice for red light therapy when it brought the technique into space around the year 2000.

Your Complete Guide to Red Light Therapy | LTO

Determine the distance (B), which corresponds to how far the LED light panel will be from the patient during therapy. ® Important! The light intensity was factory calibrated with the neoBLUE Radiometer and was based off the distance (B) of 12 inches (30.5 cm). Page 21: Adjusting Light Intensity
