The PAULING FILE database - experimental data for inorganic substances. The PAULING FILE project, named after the Nobel Prize laureate Linus Pauling, was launched some 25 years ago by Japan Science and Technology (JST). The aim was to create a tool for materials scientists searching for new inorganic functional materials. One of the main components of the project was the building up of a comprehensive database that would group experimental data published over the years and over the ...

Porous metal-organic frameworks have attracted tremendous research interest, because of the presence of tunable porous structures and site-isolated catalytic units. However, bottom-up on-surface synthesis of their inorganic counterparts, metal-inorganic frameworks (MIFs), is rarely demonstrated. Here, we report a facile epitaxial growth of one-dimensional (1D) porous metal-inorganic chains ...
