Abstract. Vermicomposts processed commercially from food wastes and paper wastes were applied, to 4.5 m² field plots, under high plastic hoop tunnels, at rates of 5 or 10 t ha⁻¹ to evaluate their effects on the growth and yields of strawberries (*Fragaria ananasa*) var. 'Chandler'. The vermicomposts were incorporated into the top 10 cm of soil and supplemented, based on chemical analyses, with amounts of inorganic NPK fertilizers calculated to equalize the initial fertilizer rates of 85 ...

In-depth research is required to study the composition of immature vermicompost and its application failure and to determine vermicompost concentrations under typical soil-water plant-micrometeorologic regimes. This will help in the augmentation of organic farming and popularization of vermicomposting for environmental sustainability.
