Solved Problems for Set Theory Review

The easiest way to solve problems on sets is by drawing Venn diagrams, as shown

Online Library Set Theory Problems And Solutions On Functions

below. As it is said, one picture is worth a thousand words. One Venn diagram can help solve the problem faster and save time. This is especially true when more than two categories are involved in the problem.

3 Proof. Let X be an arbitrary set; then there exists a set Y $\mathcal{P}(X)$ \cup $\{g\}$. Obviously, $Y \subseteq \mathcal{P}(X)$, so $\mathcal{P}(X)$ by the Axiom of Power Set. If $Y \subseteq \mathcal{P}(X)$, then we have $Y \subseteq \mathcal{P}(X)$ if and only if $Y \subseteq \mathcal{P}(X)$ - [See Exercise 3(a)]. This proves that $\mathcal{P}(X) \subseteq \mathcal{P}(X)$, and $\mathcal{P}(X) \subseteq \mathcal{P}(X)$ by the Axiom of Extensionality. t Exercise 7 (1.3.7). 2.1 Set Theory A set is a collection of distinct objects. This means that $\{1,2,3\}$ is a set but $\{1,1,3\}$ is not because 1 appears twice in the second collection. The second collection is called a multiset. Sets are often specified with curly

For any set A, the
empty set is an

element of the power set of A . Proof. This is true. The empty set is a subset of A , hence it is an element of the power set of A .

Problem 2. For any sets A and B , we have $A \subseteq B \implies 2^A \subseteq 2^B$. Proof. This is true. If $x \in 2^A$ then $x \subseteq A$ (and not in B). Problem 3.

numbers between 15 and 25. Draw and label a Venn diagram to represent the set P and indicate all the elements of set P in the Venn diagram.

Solution: List out the elements of P. $P = \{16, 18, 20, 22, 24\}$ ←
'between' does not include 15 and 25
Draw a circle or oval.
Label it P. Put the elements in P.

Let's Begin with an Activity - Boston University

By 1900, set theory
was recognized as a
distinct branch of
mathematics. At just
that time, however,
several contradictions
in so-called naive set
theory were
discovered. In order to

eliminate such problems, an axiomatic basis was developed for the theory of sets analogous to that developed for elementary geometry.
