"System Dynamics (SD) is an approach for understanding the dynamic behavior of systems, in particular social systems. These behaviors defy intuitive solutions and attempting to apply ordinary processes of description and analysis leads to inconsistencies and contradictions. Since these systems are made up of multiple, nonlinear feedback loops human mind is not able to interpret how they behave.

We will say more about this in the context of the Science of Complex Systems in Week 2. Thus System Dynamics lies at the intersection between qualitative systems thinking and quantitative complex systems analysis. Although systems diagrams can give deep insights into the behaviour of systems, they have their limitations.

Systems Thinking, Episode #2: Complex Adaptive Systems. In my previous episodes of this series on Systems Thinking, I elaborated on what systems Thinking is and on the Wicked Problems Systems Thinking is trying to solve. In this episode, I want to explore Complex Adaptive Systems (CAS). In Systems Thinking, we observe different types of systems. There are static systems like cars and complex systems like people for instance.

System dynamics is an aspect of systems theory as a method to understand the dynamic behavior of complex systems. The basis of the method is the recognition that the structure of any system, the many circular, interlocking, sometimes time-delayed relationships among its components, is often just as important in determining its behavior as the individual components themselves.

rubric of Systems Thinking versus System Dynamics. As Figure 2 is intended to suggest, my view of Systems Thinking is that it encompasses all that Jay thinks of as System Dynamics, "plus some." A parallel, non-Venn Diagram, way to interpret Figure 2 is that Systems Thinking is "System Dynamics with an aura" (you Californians will like thinking about it this way!).
