Peritoneal Dialysis - Advanced Renal Education Program

Peritoneal dialysis infection (exit-site and peritonitis) rates should be monitored and reported for every clinical dialysis program annually. The overall peritonitis rate should not exceed 0.5 episodes per year at risk. In some outstanding centers, peritonitis rates as low as 0.18 to 0.20 episodes per year have been reported.

Peritonitis in Peritoneal Dialysis - Advanced Renal ...

Peritoneal dialysis is a treatment for kidney failure that uses the lining of your abdomen, or belly, to filter your blood inside your body. Health care providers call this lining the peritoneum. A few weeks before you start peritoneal dialysis, a surgeon places a soft tube, called a catheter, in your belly.

Peritoneal Dialysis | NIDDK

Peritoneal dialysis Peritoneal dialysis (per-ih-toe-NEE-ul die-AL-uh-sis) is a way to remove waste products from your blood when your kidneys can't adequately do the job any longer. This procedure filters the blood in a different way than does the more common blood-filtering procedure called hemodialysis.

The Essentials of Clinical Dialysis 1st ed. 2018 Edition PDF

The Peritoneal Cavity as a Dialysis System The same processes are utilized in peritoneal dialysis except that dialysate is introduced into the peritoneal cavity where it comes into contact with capillaries perfusing the peritoneum and viscera. Solute diffuse from blood in the capillaries into the dialysate and are discarded.

Anatomy and Physiology of Peritoneal Dialysis

The two main types of dialysis, hemodialysis and peritoneal dialysis, remove wastes and excess water from the blood in different ways. Hemodialysis removes wastes and water by circulating blood outside the body through an external filter, called a dialyzer, that contains a semipermeable membrane. The blood flows in one direction and the dialysate flows in the opposite.

Dialysis - Wikipedia
