A fertilizer is a plant nutrient added to a soil to increase its yield. Plants need nutrients to grow and produce fruits and vegetables. Two categories of nutrients have been identified in fertilization: macronutrients and micronutrients. There are only six macronutrients and they are required in large amounts by plants: nitrogen, phosphorus, potassium, sulfur, magnesium, and calcium.

NPK fertilizers are three-component fertilizers providing nitrogen, phosphorus, and potassium. NPK rating is a rating system describing the amount of nitrogen, phosphorus, and potassium in a fertilizer. NPK ratings consist of three numbers separated by dashes (e.g., 10-10-10 or 16-4-8) describing the chemical content of fertilizers.

Among coated fertilizers, one of the best known and publicised fertilizers is S-coated urea. Sulphur coated urea was first developed by the TVA of USA in the early 1960s for which it was granted a patent in 1967 (US Patent 3,295,950). Each prill of urea was given a coating of elemental S. Bench scale production also started in 1961.

FertiNitro (Fertilizantes Nitrogenados de Oriente) is Venezuela's largest fertilizer company, producing around 1.5m tons of urea per year. It was nationalised in October 2010, having previously been owned by Pequiven [] (35%) and Koch Industries (35%). The nationalization meant a substantial windfall for holders of FertiNitro corporate bonds, with the government offering 105 cents on the dollar.
